Sound heart and blood flow Energy - Petroleum

Once a serious incident happens, it

- ✓ Endangers the lives and health of people in the surrounding communities
- ✓ Leads to serious problems for the supply chain and people's daily lives
- ✓ Causes a state of crisis for the continuation of the company's business

Eliminate serious incidents with
Risk Based Process Safety

- current process safety curriculum/topics offered by universities;
- challenges in delivering process safety education (including obstacles and barriers):
- expectations of the students
- support required from the industry

The Global Community Committed to Process Safety
